OBJECTIVES

This continuing nursing educational (CNE) activity is designed for nurses and other health care professionals who are care for and educate patients and their families regarding diabetes risk factors in Mexican Americans. Nurses wishing to obtain CNE credit can use the evaluation that follows. After studying the information presented in this article, the nurse will be able to:

1. Describe nausea and vomiting in the clinical setting.
2. Explain the role of antihistamines, dopamine antagonists, and corticosteroids as antiemetic drugs.
3. Define use of serotonin (5-HT3) receptor antagonists and neurokinin-1 receptor antagonists in the treatment of nausea and vomiting.

This independent study activity is co-provided by AMSN and Anthony J. Jannetti, Inc. (AJJ).

AJJ is accredited as a provider of continuing nursing education by the American Nurses Credentialing Center's Commission on Accreditation (ANCC-COA).

Anthony J. Jannetti, Inc. is a provider approved by the California Board of Registered Nursing, Provider Number, CEP 5387.
